**INTERACTION DESIGN**  
Fall 2012

## **Assignment 1016 Feedback**

**Carlos Agudo**

*3a* — Your code shows a decent understanding of how user interfaces are structured, with some technology-specific glitches here and there (see *4a*). (+)

*3c* — Your code mostly demonstrates understanding of MVC separation, although you have a slight slip with some JavaScript code and `style` attributes in the Finder Preferences facsimile HTML. (+)

*4a* — Your code generally accomplishes what it set out to do. Your latest commits are ahead of what you've uploaded to *my.cs.lmu.edu* though—it would be good to keep that up-to-date.

Most of your code does not validate, showing a range of errors. Some are not your fault, but are all fixable if you look them up or ask me. Some are more on you, like some unclosed tags and incorrect basic syntax (e.g., missing spaces where they are required). (|)

*4b* — You have separate CSS files, but had the occasional separation slip (as stated in *3c*). In addition, for best [perceived] performance, move your `script` elements to the end of the web page. (|)

*4c* — Your HTML code is quite understandable, and consistently spaced. Your CSS code is also fairly understandable, but that is because CSS is pretty simple; the actual formatting shows a mix of tabs and spaces. You should standardize on spaces; they are less prone to inconsistent displays. The indentation probably looks fine in your editor, but this is not guaranteed (look at your code in Chrome, for example). No comments were seen but it is true that they are not too critical here. (|)

*4d* — Your code shows that you figured out a good number of things on your own. And I know that you also used the instructor quite effectively as a resource, heh. (+)

*4e* — Excellent commit pacing and messages. (+)

*4f* — Submitted on time. (+)
